

Ethical review form A

Primary data collection

(possibly with use of secondary/non-empirical data)

Name:

Student number:

Date:

1. Provide your research question and a short summary of your research design (how/who will you measure, using what method) in as few words as possible. Please include any information relevant to ethical considerations that involve risk to participants.

2. Describe the **primary data** you will collect and who and/or where from.

3. Will you adhere to the General Data Protection Regulation (GDPR), ensuring data privacy and security in the storing, handling and sharing of data? You can find more information in the ethical review documentation on Canvas.

- ☐ Yes.
- ☐ No.

4. How/where will you store your data?

5. How will you process your data and safeguard confidentiality (for example, how secure is the software that you will use, what data will you store separately, what data will you *not* record or leave out of the report)?

6. What will you do with the data after the research is completed?

7. How will you obtain informed consent? (If not, why not?)

8. Does your **primary** data collection involve one or more of the following?

- Participants who are **unable or less able to give consent** - e.g. (mildly) mentally disabled persons, minors (unless parent or guardian can be asked to consent), or persons over whom the researcher has a form of formal power (e.g. employees);
- Participants for whom the research **risks worsening a problematic condition** - e.g. research that risks re-traumatization (e.g. trauma victims), exacerbating stigma (e.g. sex workers), or persecution (e.g. undocumented persons);

- A **dangerous location or social context**, either in the physical world or online - e.g. criminal circuit, so-called “high-control groups” (sects), or areas for which the Dutch Foreign Ministry has issued a code ‘red’ or ‘orange’;
- Contexts with a **high risk of interaction between research-related decisions and personal consequences** for the researcher and/or research subjects - e.g. research in the researcher’s own immediate work, study, or family environment on a very sensitive topic, that could compromise relationships.

- ☐ Yes
- ☐ No. **Continue to question 11**

9. Which of the following apply to your research? (multiple answers possible)

- ☐ Participants who are **unable or less able to give consent** - e.g. (mildly) mentally disabled persons, minors (unless parent or guardian can be asked to consent), or persons over whom the researcher has a form of formal power (e.g. employees)
- ☐ Participants for whom the research **risks worsening a problematic condition** - e.g. research that risks re-traumatization (e.g. trauma victims), exacerbating stigma (e.g. sex workers), or persecution (e.g. undocumented persons)
- ☐ A **dangerous location or social context**, either in the physical world or online - e.g. criminal circuit, so-called “high-control groups” (sects), or areas for which the Dutch Foreign Ministry has issued a code ‘red’ or ‘orange’
- ☐ Contexts with a **high risk of interaction between research-related decisions and personal consequences** for the researcher and/or research subjects - e.g. research in the researcher’s own immediate work, study, or family environment on a very sensitive topic, that could compromise relationships

10. How will you mitigate the risk(s) involved?

11. Will you use **secondary** empirical data (you will reuse data already recorded by others - e.g. existing databases, policy documents, media statements by public figures) or write a **non-empirical** thesis (a theoretical thesis or project using simulated data)?

- ☐ Yes.
- ☐ No. **Continue to question 14**

12. If you use **secondary** data, describe from who and/or where these data were collected. If you will do **non-empirical** research *only*, write 'NA' (for not applicable).

13. If you collect secondary data, what *type* of **secondary** or **non-empirical** data will you use? (multiple answers possible)

- ☐ Non-empirical - **Published academic literature** or **quality journalistic publications**
- ☐ Non-empirical - **Statistically simulated data**
Note: This does not include data created through generative AI without full transparency; this is considered fraud in accordance with the Regulations Governing Fraud and Plagiarism for UVA Students.
- ☐ Secondary - **Documents** (text/audio/video) in the **public domain** (e.g. government reports, white papers, records of public hearings)
- ☐ Secondary - **Publicly available survey data** that have received ethical clearance and are anonymized and not traceable to persons (e.g. European Social Survey, PISA, PIAAC)
- ☐ Secondary - **Aggregated publicly available statistical data** (e.g. World Bank, CBS, OECD, UNESCO statistics)
- ☐ Secondary - **Data from public figures in public contexts** (e.g. speeches, interviews, etc. of politicians or celebrities aware that they expressed themselves in public such as political speeches, political programs, newspaper interviews;
Note: The use of responses from the audience is not covered by this definition).
- ☐ Other...

14. If there are any risks that were not yet addressed, describe them here. We specifically mean risk of disadvantaging or harming respondents, stakeholders, yourself or the academic endeavour. Describe how you address these risks.
